THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

DETAILED ACTION

Response to Amendment

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William C. Boling on 6/10/2008.

The application has been amended as follows:

Claim 14 should be amended to read:

14. (currently amended) A mobile unit for communicating data signals using a spread spectrum cellular network, the cellular network including a plurality of base stations coupled to the cellular network and the mobile unit being assigned to an active base station that is one of the plurality of base stations, the mobile unit comprising:

- a) means for receiving a signal of [an active] a target base station that is another of the plurality of base stations; and
- b) means for determining an interference density to the target base station from the received signal including:
 - i) means for selecting a code sequence that is at least quasi-orthogonal to all Orthogonal code sequences currently employed by the target base station,

- ii) means for synchronizing the selected code sequence with an Orthogonal code sequence boundary of the target base station's pilot sequence,
- iii) means for correlating the received signal with a corresponding P/N sequence of the target base station and also with the selected code sequence, and
- iv) means for determining an energy of the P/N correlated, selected code correlated received signal.

Allowable Subject Matter

II. The following is an examiner's statement of reasons for allowance:

Claim 1 recites a system for communicating data signals using a spread spectrum cellular network, comprising a plurality of base stations coupled to the cellular network, each base station of the plurality of base stations including means for transmitting a pilot sequence; and a mobile unit coupled to the cellular network and assigned to an active base station that is one of the plurality of base stations, with a structure as defined in the specification (pages 7-14) including the mobile including a) means for receiving a signal of a target base station this is another of the plurality of base stations; and b) means for determining an interference density to the target base station from the received signal including: i) means for selecting a code sequence that is at least quasi-orthogonal to all Orthogonal code sequences currently employed by the target base station, ii) means for synchronizing the selected code sequence with an Orthogonal code sequence boundary of the target base station's pilot sequence, iii) means for correlating the received signal with a corresponding P/N sequence of the target base station and also with the selected code

sequence, and iv) means for determining an energy of the P/N correlated, selected code correlated received signal.

Applicant's independent claim 1 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Claims 3-13 are allowable based on their dependence of independent claim 1.

Claim 14 recites a mobile unit for communicating data signals using a spread spectrum cellular network, the cellular network including a plurality of base stations coupled to the cellular network and the mobile unit being assigned to an active base station that is one of the plurality of base stations with a structure as defined in the specification (pages 7-14) including the mobile unit comprising: a) means for receiving a signal of a target base station that is another of the plurality of base stations; and b) means for determining an interference density to the target base station from the received signal including: i) means for selecting a code sequence that is at least quasi-orthogonal to all Orthogonal code sequences currently employed by the target base station, ii) means for synchronizing the selected code sequence with an Orthogonal code sequence boundary of the target base station's pilot sequence, iii) means for correlating the received signal with a corresponding P/N sequence of the target base station and also with the selected code sequence, and iv) means for determining an energy of the P/N correlated, selected code correlated received signal.

Applicant's independent claim 14 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Claims 16-26 are allowable based on their dependence of independent claim 14.

Claim 27 recites a method of communicating data signals using a spread spectrum cellular network, the cellular network including a plurality of base stations coupled to the cellular network and a mobile unit that is assigned to an active base station that is one of the plurality of base stations, with steps as defined in the specification (pages 7-14) including a) receiving a signal of a target base station this is another of the plurality of base stations; and b) determining an interference density to the target base station from the received signal including: i) selecting a code sequence that is at least quasi-orthogonal to all Orthogonal code sequences currently employed by the target base station, ii) synchronizing the selected code sequence with an Orthogonal code sequence boundary of the target base station's pilot sequence, iii) correlating the received signal with a corresponding P/N sequence of the target base station and also with the selected code sequence, and iv) determining an energy of the P/N correlated, selected code correlated received signal.

Applicant's independent claim 27 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Claims 29-39 are allowable based on their dependence of independent claim 27.

Claim 40 recites an article of manufacture for use in a mobile unit for communicating data signals using a spread spectrum cellular network, the cellular network including a plurality of base stations coupled to the cellular network and the mobile unit being assigned to an active base station that is one of the plurality of base stations with the article of manufacture comprising computer readable storage media including program logic embedded therein that causes control

circuitry to perform steps as defined in the specification (pages 7-14) including a signal of a target base station that is another of the plurality of base stations; and b) determining an interference density to the target base station from the received signal including: i) selecting a code sequence that is at least quasi-orthogonal to all Orthogonal code sequences currently employed by the target base station, ii) synchronizing the selected code sequence with an Orthogonal code sequence boundary of the target base station's pilot sequence, iii) correlating the received signal with a corresponding P/N sequence of the target base station and also with the selected code sequence, and iv) determining an energy of the P/N correlated, selected code correlated received signal.

Applicant's independent claim 40 comprises a particular combination of elements, which is neither taught nor suggested by the prior art.

Claims 42-52 are allowable based on their dependence of independent claim 40.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

III. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kuroyanagi et al. Pub. No.: US 2004/0131030 A1 discloses a CDMA communications system using multiple spreading sequences.
